

Monty's Joy Juice Application Recommendations

For above the ground vegetables....

Mix Monty's Joy Juice 8-16-8 (yellow label), according to directions.

For Broccoli, Peppers, Squash, Tomatoes, etc.

Apply to soil sufficient liquid to reach the root zone. Do this weekly and after rains...every time your plants need water include Joy Juice for optimum yields.

For Beans and Peas: Apply 8-16-8 the same as above. But, once plants reach mature size and begin to bloom or set fruit, discontinue root feeding. Instead spray or mist foliage (leaves) at least weekly until harvest.

For below ground vegetable (Beets, Carrots, Potatoes, Turnips, etc.)

Apply diluted Joy Juice 2-15-15 (orange label) to the soil weekly after growth begins until harvest. Note Spraying or misting foliage can only increase the effectiveness.

For vine crops (Blackberries, Cucumbers, Grapes etc.)

Apply diluted Joy Juice 8-16-8 to the root zone when these plants begin to grow. Do this once or twice more until the leaves are mature. Then, spray or mist foliage weekly (or more often) until harvest.

For Fruit Trees:

Spray foliage with 8-16-8 every other week for one month. The second month, spray leaves twice weekly with 2-15-15 until blooms appear. Do not fertilize after blooms appear.

For Mature Plants and Grass, those that you don't want to grow or get larger, but want to be healthy:

Use Monty's Joy Juice 2-15-15 (orange label) on the soil after plants have started to grow. Use twice 2-3 weeks apart. Then spray or mist foliage once or twice monthly for the rest of the growing season.

It will prove beneficial to water the ground before applying Monty's Joy Juice in an Ortho Dial'n Spray Sprayer. Affix the enclosed "stick on" label and dilute according to the label and dial setting. What used to be a chore is now a Joy with Monty's Juice.
